Edit question

I am looking at constructing a list with ID and a number of values for use with tabulated-

But the following only has a single associated

with each ID. (setq id-values-list (list (cons

ID1 va (cons ID2 va (cons ID3 va

Then continued with the following because I think it requires an associated list.

(setq id-values-list `(list (ID1 . ,(li (ID2 . ,(lis (ID3 . ,(lis

But this prints as List: ((ID1 "value1a" "value1b") (ID2

List: ((ID1 . ("value1a" "value1b")) (I

Is the last what is expected for tabulated-

(a . b) represents a cons cell, which is a pair of two elements, while (a b c)

list-print ?

Rather than what I had expected

case of associated lists with an ID and values I am getting very confused.

What does tabulated-list-print exactly

require as input where there are multiple

values? I would like to see an example.

elements enclosed within parentheses. In the

represents a list, which is a sequence of

If a list, each element has the form (ID [DESC1 ... DESCN]) which indicates one uses a vector as well.
